## Understanding Cancer

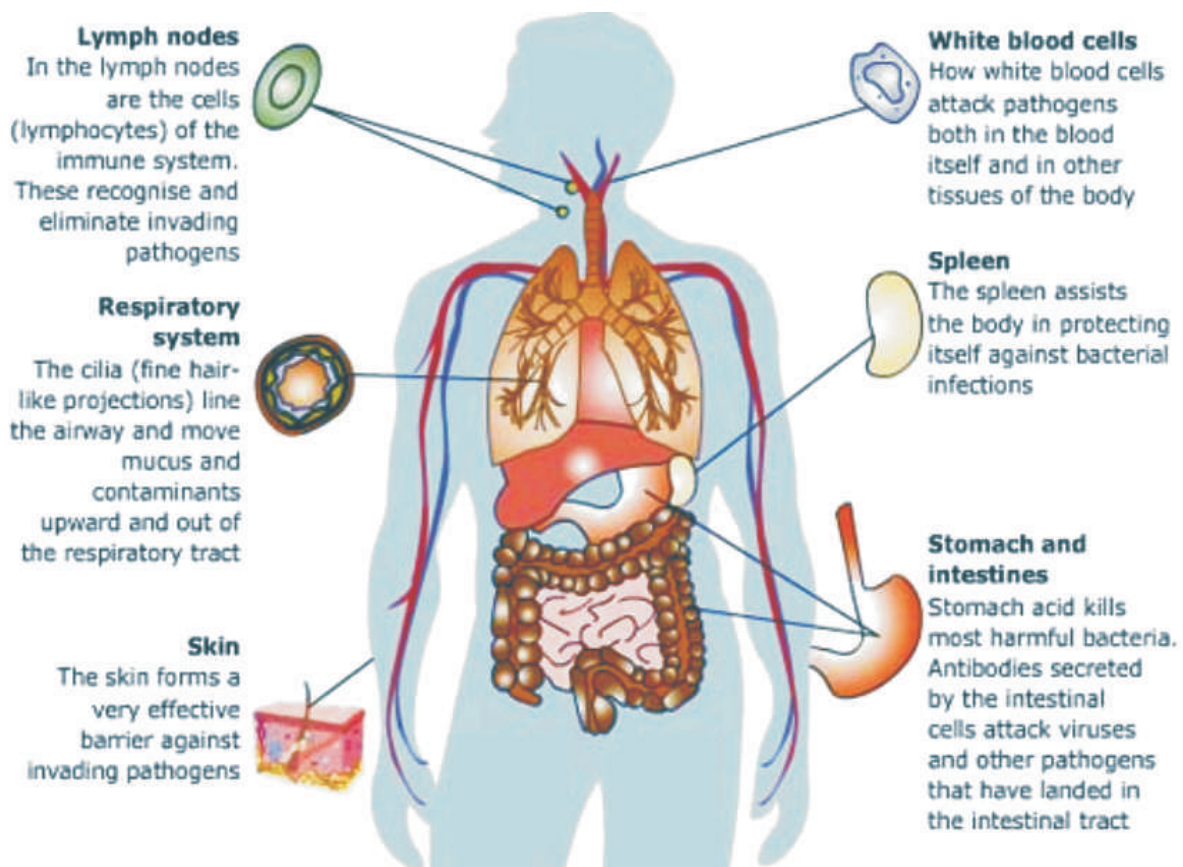

It should be understood – Cancer is not one disease, it is hundreds if not thousands. It is this variation, which makes it so difficult to understand. Furthermore, it is the reason why some people are healed with traditional medical therapy and others with natural therapies and why some lose the battle and their lives.

The health of individual immune systems is paramount to withstanding disease; it's an area, which was long overlooked by traditional medicine – in a similar way, that it is only in recent years that the medical professionals linked the connection of nutrition to health.

The attitude of treating symptoms rather than the cause does dis-service to us all – for true health and effectiveness of treating disease, one must look first at individual immune systems to discover why it is 'malfunctioning'.

**A highly functioning immune system has the ability to prevent and cure disease.**

**To fully evaluate the condition of *YOUR* immune system book an appointment**
